Personal information

name : Wongsatorn Naruroodganawaree Man 26 year old

Interested work : Full-stack Developer , Front-end Developer

About me

IOT device developer and software developer with experience and expertise in Full Stack development, working with technologies such as React and Next.js. and can use other technologies besides those mentioned above. The details will be on the next page. and working with databases and developing APIs for use through other software, including troubleshooting and preventing problems Has the ability to use other operating systems. such as Linux and making IT equipment interoperable. In addition, being able to collect requirements from users also has knowledge in being a tester to test the work in order to test the product before actually using it. In the field of software and hardware

Still eager to learn and develop new skills. can also adapt to new technology every day and work with teams and users. Can talk with people involved in that work.

Work experience

VSK AUTO PARTS (current SUPER PART COMPANY LIMITED)

Software developer

May 2024 - October 2024

job position Full Stack Software Developer

Responsible for developing, inspecting, improving and solving problems. Including creating solutions and summarizing the working procedures of the entire system within the Software House together with the department heads. Because there hasn't been a system manager for a long time. Main duties include:

1) Create new software, develop/improve existing software.

Create a new system to help simplify the old work process that involves receiving requirements from department heads who use that system. because of the old system It has been used for a very long time. until the system was added From the beginning it was a system. Work is suitable for 200 employees, but at present the system cannot support enough and must with additions until the system becomes slower to use and has functions that are not used But there is an impact on other main systems.

Therefore a new system must be made. to work with the old system Before gradually moving to the new system, the existing system will be separated into separate programs for different departments. But the work that is the common point of each department is still there.

Take care of all sales websites of the company.

<https://www.vskautoparts.com>, <https://www.superpart.co.th> , <http://milework.com> , <https://cpsautomotive.co.th>

2) Solve urgent problems

- In the main system of the Software House used in every department, for example, data does not appear. Duplicate customer information, lost data, slow loading, or website crashes.
- Coordinate with relevant department heads and responsible service providers. To check for problems that occur and make corrections.

3) Accepting work, inspecting and solving general problems.

- Receive work from the system for company work A system that all employees can use and will report problems that occur with employees.
- Receive problems from users, such as adding functions. Reduce unnecessary work steps But you must also receive opinions from those involved.
- Ask users for details about the problem. and resolve issues via remote assistance using Anydesk.
- Explain the working of the software system to new employees. In the event of a sudden resignation of an employee in a position with no replacement.

4) Check for problems that occur. and fix the problem so that it does not occur again and update new methods of use In the case of system changes

From point 3, if the problem can be solved without being a User Error, we will coordinate with Head of the department and tell the method that will be used to solve problems so as not to affect Employees who are still working

5) Creating and managing employee information (except personal and financial information)

- Manage the system, employees, and email by pulling a list of all users and creating individual email accounts.
- Troubleshoot and handle email related complaints as reported by users.

job position **Front-end Developer**

Responsible for developing, checking, improving, and solving problems that occur in the Web Applications development process by working with the development team. Details and use of related tools are as follows:

1) Brief details Working with a team in the Frontend position

Develop hospital systems related to From managing the results of LAB Stem Cell in the Frontend position by working

Together with the team, the team consists of 2 frontend people and 2 backend people. Systems Analyst 1 person Tester 2 people

2) Details of work performed

2.1 Software Stam Cell system in Phase 2 and Phase 3

Phase 1 involves designing the system before presenting it to the customer. There is no work in this section. But there is a study of the operation of the system. for reference Programming because the software will be consistent because the LAB system will be further divided. But the work must be connected.

Phase 2 is creating software for use by customers to try and test whether it works or not. In Phase 2, customers will contact SA via Line or call to request system adjustments or additional requests before SA will inspect. Take the test before going to pay work to the team. Pass. Google Sheet, which will tag work for the next team

Phase 3 is actually in use.

2.2 What is in the system?

In the Software Stem Cell system, there are 9 separate modules.

2.2.1 Marketing

Used for managing marketing campaigns. public relations and analysis of customer interest regarding Stemcell services include storing customer information for contacting or offering promotions.

2.2.2 Sale

Manage sales processes such as contacting customers, quoting, and recording orders. Used to track sales status and sales team performance.

2.2.3 Logistic

Take care of logistics, such as delivering stem cell samples from the collection point to the laboratory. Track shipment status and ensure sample safety.

2.2.4 Clinical Coordinator

Coordinate between patients, doctors, and sample collection teams. Verify the accuracy of patient information and Related documents

2.2.5 Collection center

Manage the stem cell sample collection process. Record information about the sample collected, such as date, time, and location.

2.2.6 Lab

used for managing the stem cell monitoring and preservation process in the Laboratory. Record the quality and condition of the test results of the cells.

2.2.7 Management

Used to manage resources, personnel, and plan work in the overall system.
Helps analyze data for organizational decision making.

2.2.8 Q&A (Quality Assurance)

Inspect and insure quality in every process. From sample collection to room storage
Operations, document management and work standards

2.29 Admin

Manage and set user access rights to the system Manage system information such as
database updates and Maintenance

2.3 Nature of work performed and responsible work

Receive work directly from SA and Test, or receive work from Google Sheet, or from
other work assignment programs such as Trello and Slack. Work will be assigned and assigned
to others. It involves working with a team by each team member. Have your own duties and
work that can be done

Develop software or a working interface similar to Figma according to the UX/UI design,
with Mockup Data for checking basic functionality. Before connecting to the Backend further,
there is consultation and advice on the design of some UX/UI parts because some designed
appearances must be related to other parts as well, for example, some new appearance
designs will have Impact on parts of the Backend that are not supported by the database.

3) Jobs other than Frontend positions

Assist SA and Tester in checking the functionality of the software, making corrections
immediately when encountered. and manage to create Online documentation for use in the
system By adjusting the LAB pdf document that the customer sent to convert into an online
document that is similar to the document using pdfmake

<https://github.com/mek0707/work/blob/main/pdfmake.png> by

This pdfmake can work with the Backend side.

ability

Core competencies

1. Website design and development (Frontend Development)
HTML , CSS , Tailwind CSS , JavaScript , React , Next.js: Framework
2. Server-side website development (Backend Development)
Node.js , API
3. Data management and analysis (Database & Query)
SQL , MySQL , MongoDB
4. General program development (Programming & Scripting)
Python , C , C# , PHP
5. System management and DevOps tools
Linux , GitHub
6. Additional tools and features (Libraries & Frameworks)
jQuery
7. Hardware techniques
arduino , node mcu esp8266 , raspberry pi
8. Communication and collaboration (Collaboration Tools)
Figma , Slack

Secondary ability

1. Software development and design
UI/UX Design Basic , Tester Basic
2. Tools and platforms
Docker

Other abilities

general

1. Read, listen, and speak English at the A2 system.
2. Have knowledge of network systems of Cisco equipment
3. Can use basic programs: Word, Excel, Powerpoint, Outlook
5. Able to learn various tasks quickly
6. Able to communicate, collect information, explain and propose solutions to supervisors, teams or users.
7. Able to work with others. Able to adapt in the workplace

Abilities other than these can be trained further. To be suitable for the technology that the company uses

Academic results and various certification documents

This will be attached to the CV as well.

DIPLOMA OF VOCATIONAL EDUCATION (Dip.Voc.Ed.) 2014

College Code 1380096101

College Name Thungsong Technical College

Province Nakhon Si Thammarat

Previous School Thungsong Technical College

Student No. 6131050017

Province Nakhon Si Thammarat

Student's Name Mr. Wongsathon Naruerotchanawari

Entry Qualification Certificate of Vocational Education

Race Thai Nationality Thai Religion Buddhism

Credits 105 Cumulative G.P.A. 3.95

Date of Birth October 07, 1998

Date of Admission May 15, 2018

ID No. 1 1037 02687 51 1

Credits Transferred -

Father's Name Mr. Naruethap Naruerotchanawari

Credits Enrolled 86

Mother's Name Mrs. Tassanee Naruerotchanawari

Total Credits 86

Area of Study Industrial Trades

Cumulative G.P.A. 3.48

Program Electronics

Date of Vocational Education Standard Assessment Achieved February 28, 2020

Field of Specialization Industrial Electronics

Date of Completion March 10, 2020
